CONIFERS, ROOTED CUTTINGS AND TRANSPLANTS

The following list of rooted cuttings will be for fall to spring shipment except varieties with an asterisk (*) are for Spring delivery, April-June. Most transplants are grown in full sun. The sandy loam soil in which they are grown assures good root systems.

‡ Indicates 1000 rate 10% less.

Broad-leaved Evergreens

<i>Azaleas</i>	Page 10
<i>Camellias</i>	Page 12
<i>Heather</i>	Page 15
<i>Rhododendrons</i>	Page 19

The transplants are rooted cuttings planted out in field beds or in shade house in the early summer. Azaleas and Heathers especially benefit with a good quantity of peat moss added to the soil. Where no price is given the item is not available this season.

Azaleas

It is best to give young Azaleas protection from wind and sun the first winter to prevent the bark from cracking. This can be done by building frames 1 foot high around the beds and shade with lath or other material. Also it is well to hold up on fertilizers after July and not water much after Sept. 1. This acts to harden off the wood, making them much hardier against severe cold weather.
